DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) filed on 07/26/01 complies with the provisions of MPEP § 609. The information referred to therein has been considered as to the merits. (see attached PTO-1449 form).

Drawings

2. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor

Art Unit: 2177

and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walker et al. ("Walker"), US. Patent No. 5,897,620 in view of Bierma et al. ("Bierma"), U.S. Patent No. 5,758,149, supplied by applicants in IDS, paper no.4.

As to claims 1 and 5, Walker substantially discloses the invention including a data processing system for determining the availability of seats in a particular airline flight (col. 6, lines 1-4 et seq). In particular, Walker's system provides a travel agent that determines whether entries for seat availability in the database are current such that the agent can transmit a query to an airline with available seats to thereby reserve a seat on behalf of the agent's customer (col. 6, lines 4-15 et seq). Walker does not particularly disclose a cache for maintaining the entries for seat availability of airlines companies. However, Bierma discloses an analogous system suggesting that caches are well known as repositories for storing and maintaining data concerning airline seat availability (col.1, lines 41-46; col.3, lines 27-32 et seq). It would have been obvious to one of ordinary skill in the art of data processing at the time of the present invention to combine the teachings of the cited references. Bierma's teaching of caches would allow travel agents of Walker's system to readily and expeditiously access on-line and up-to-date information regarding seat availability for a particular airline without overloading and overburdening the system.

Art Unit: 2177

As to claim 2, Walker discloses the step of querying the travel planning system to monitor the seating availability in flights for certain day, date (col. 5, lines 54-63 et seq).

As to claims 3-4, Walker discloses the step of updating the RMS database to reflect therein the current state of seat availability and customers demand for seating in a particular flight (col. 14, lines 47-62 et seq).

5. The limitations of claims 6-18 have already been addressed in the rejection of claims 1-5 above. They are therefore rejected on similar grounds.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Please see attached PTO-892.
